

● REQ-01 [Low]

The system shall support Apple CarPlay and Android Auto via both wired (USB) and wireless connections.

🔍 What is missing:

- No specific details on the supported devices for each platform

📄 Vague terms:

- "wired (USB)" - The term is vague as it does not specify whether it refers to a physical connection or a method of pairing
 - ↳ ["A tester might assume that 'wired' means a direct USB connection, while another assumes it's a Bluetooth-based pairing"]

🔪 Missing acceptance criteria:

- No definition of what constitutes a successful pairing process

⚠️ Edge cases not covered:

- What happens when the system is unable to connect to the paired device?

? Ask the product owner:

What are the specific requirements for Apple CarPlay and Android Auto compatibility?

✍️ Suggested rewrite:

The system shall support Apple CarPlay and Android Auto via both wired (USB) connections and wireless connections, using Bluetooth-based pairing methods.

● REQ-02 [Medium]

Bluetooth 5.0 or higher shall be supported for hands-free calling and audio streaming.

🔍 What is missing:

- No definition of what constitutes a successful Bluetooth connection

📄 Vague terms:

- "hands-free calling" - The term is vague as it does not specify whether it refers to voice commands or actual hands-free audio streaming
 - ↳ ["A tester might assume that 'hands-free' means voice commands, while another assumes it's actual audio streaming"]

🔪 Missing acceptance criteria:

- No definition of what constitutes a successful Bluetooth connection

⚠️ Edge cases not covered:

- What happens when the system is unable to establish a Bluetooth connection?

? Ask the product owner:

How does the system define a 'successful' Bluetooth connection for hands-free calling and audio streaming?

✍️ Suggested rewrite:

The system shall support Bluetooth 5.0 or higher for hands-free voice commands and actual audio streaming.

● REQ-03 [Low]

The system shall support simultaneous pairing of up to 5 Bluetooth devices with automatic reconnection to the last active device.

🔍 What is missing:

- No definition of what constitutes a successful pairing process

🔪 Missing acceptance criteria:

- No definition of what constitutes a successful pairing process

⚠️ Edge cases not covered:

- What happens when the system is unable to connect to one of the paired devices?

? Ask the product owner:

How does the system define a 'successful' pairing process for simultaneous Bluetooth device pairing?

✍️ Suggested rewrite:

The system shall support simultaneous pairing of up to 5 Bluetooth devices with automatic reconnection to the last active device, using a defined pairing process.

● REQ-04 [Medium]

Wi-Fi hotspot capability (4G/5G) shall be available as a built-in or tethered option.

🔍 What is missing:

- No definition of what constitutes a successful Wi-Fi hotspot connection

🔪 Missing acceptance criteria:

- No definition of what constitutes a successful Wi-Fi hotspot connection

⚠️ Edge cases not covered:

- What happens when the system is unable to establish a Wi-Fi hotspot connection?

? Ask the product owner:

How does the system define a 'successful' Wi-Fi hotspot connection for 4G/5G networks?

✍️ Suggested rewrite:

The system shall support Wi-Fi hotspot capability (4G/5G) as a built-in or tethered option, using a defined connection process.
